

LATEST NEWS

Looking towards 2021, together!

In 2020, we overcame all obstacles by sticking together - while apart. At SOPHIA, we strongly believe that togetherness is and will be the key to help more and more people in this new year and for the ones to come. The world may have shut down for a bit, but we're even more driven to fulfil our mission, for the greater benefit of a new, more personalized and sustainable healthcare, for all.

HAPPY 2021!

SOPHIA's unique approach to Data-Driven Medicine

Our CEO Jurgi Camblong was presenting the SOPHIA approach at the 39th Annual J.P. Morgan Healthcare Conference last January 11th.

He gave an exclusive presentation about our innovative outlook on multimodality: after the Genomics revolution that is already making a difference in Oncology, we're convinced that other data modalities such as Radiomics and Proteomics will make Genomics data even more insightful, helping break data silos and standardize data across hospitals and labs for a better impact on patients all over.

SOPHIA at PMWC: Tracking COVID-19 with a System Clinical Approach

The COVID-19 pandemic makes it necessary for leading experts from across disciplines and geographies to come together to jointly address the challenges we are facing. On this occasion, our co-Founder Lars Steinmetz will be part of an exclusive panel discussion: Tracking COVID-19 with a System Clinical Approach.

He will share the virtual floor with Kevin Hrusovsky, CEO at Quanterix, and Ida Grundberg, CSO at Olink Proteomics, in a session chaired by world-renowned biologist Lee Hood.

Discover the newly released Cascading filters!

Exome sequencing is transforming the field of rare disease, yet healthcare scientists often spend time trying to filter and sift through tens of thousands of variants to identify the one that matters most.

We recently introduced the new Cascading Filters to the SOPHIA Platform. This user-friendly variant filtering feature allows users to:

- quickly create and edit combinations of filters,
- save and re-use filter cascades throughout their account, and
- track, save and report their filtering strategies, to shorten and streamline variant interpretation.

Read our guidelines to better understand and manage COVID-19

Our team of genomic experts has joined international efforts to advance the surveillance and research of COVID-19. As scientists keep discovering multiple variants of the virus with NGS, guidelines were needed to help ensure both the accuracy and reliability in the data that will lead to the future development of treatments and vaccines.

"We hope that these recommendations will further support the ongoing efforts of the genomics community working to better understand and manage SARS-CoV-2," said Dr. Zhenyu Xu, our Chief Scientific Officer, leading these efforts.

Join our exclusive webinar on January 28th!

Do you need to assess myeloid malignancies, but face the challenges of ever-evolving recommendations? Attend the upcoming webinar *Implementation of a Customized Myeloid NGS-based Solution in an Academic Clinical Laboratory* on January 28th at 6 PM CET (12 PM EST), with Dr. Noah Brown from the University of Michigan.

Learn more on how his laboratory decided to optimize resources and developed an NGS solution in collaboration with SOPHIA to keep pace with the ever-evolving recommendations for myeloid malignancies assessment.

EMPLOYEE MOTIVATION

Finding Solutions to Make a Difference

"My learning curve at SOPHIA has been such a rich experience that I could not have found anywhere else. Just that is already amazing, but the mission of the company makes it even more fulfilling, because we all know that at the end of the day, our work, regardless of our role, is making a difference and contributes to save lives. Having the chance to be part of that makes it so meaningful to get up and go to work every day and gives me immense pride and joy."

- Chris Aldridge
